

Belluno Payments Integration Module

Installation Guide

We recommend that you have a testing environment to validate changes and updates before updating your store in production. Also that all information is backed up before performing any update/installation procedure.

Compatibility Versions

Magento 2.4.X & PHP 7.4

Magento 2.3.3 & PHP 7.3

Installation of Module

Download the module and follow the steps below:

[Belluno-Magento](#)

Installation using composer

1. Install via packagist:

```
composer require belluno/module-magento
```

At this time, you may be asked for your Magento authentication credentials. If in doubt, there is documentation that will help you. [Link](#)

2. Execute this commands:

- `bin/magento setup:upgrade`
- `bin/magento setup:di:compile`
- `bin/magento cache:clean`

Installation using GitHub

If your store was created through the clone or download of the magento project, follow the next steps:

1. Extract the contents of the ZIP download and move the directory `belluno-magento2` into the folder `Belluno` and rename to `Magento2`
2. Check if your store directory looks like this `app/code/Belluno/Magento2`
3. Enable the module with the following command `bin/magento module:enable Belluno_Magento2`
4. Execute this commands:
 - `bin/magento setup:upgrade`
 - `bin/magento setup:di:compile`
 - `bin/magento cache:clean`
